

## AVERAGE SAMPLING GAUGE

This sampling gauge gives perfectly average and representative samples of the contents of tanks up to 40 metres high.

The gauge may also be equipped with a thermometer so that both the average sample of the tanks contents and their average temperature can be obtained in a single operation.

The operating principle is quite simple: samples are taken during the gauge's free descent into the tank. The gauge is hermetically sealed upon contact with the tank bottom.

Like all our sampling devices, the average sampling gauge is fitted with the appropriate seals for the products being sampled in order to ensure perfect tightness and thus an optimum result.

Weight: 1.5 Kg.

Height: 600 mm

Diameter: 60 mm

Material: 304L stainless steel

Capacity: 1 L

Seals: Viton® ou Kalrez®
